CampMailer

Quick guide

Send personal emails from your own Gmail. Schedule them, track them, and stay out of the spam folder.

Personalise | Schedule | Track | Newsletter

OVERVIEW

What you can do

CampMailer sends one-to-one emails through your own Gmail, so replies come straight to you. Everything works on a phone.

Personal emails

Each person gets their own name, role or any detail from your list.

Excel or CSV

Drop a spreadsheet or paste a list. Bad and duplicate emails are skipped.

Smart scheduling

Small groups, your hours and days, and a slow warm-up for new senders.

Inbox check

A score and plain advice before you send, so fewer emails land in spam.

Tracking

See who opened and clicked. Switched off until you turn it on.

Analytics

Charts, best time to send, top links, and a report you can download.

Unsubscribe built in

Every email has an unsubscribe link, and those people are skipped from then on.

Newsletter

A saved list with a sign-up link. Send to everyone on it in a few taps.

App, alerts, dark mode

Install it on your phone, get notified when emails go out, switch to dark.

Your first campaign in five steps

1 Connect Gmail
Make an App Password and sign in.

2 Add your list
Upload Excel or CSV.

3 Write and check
Merge fields, preview, Inbox check.

4 Send or schedule
Now, or in small groups.

5 Track results
History and analytics.

STEPS 1 AND 2

Connect and add your list

1 Make an App Password

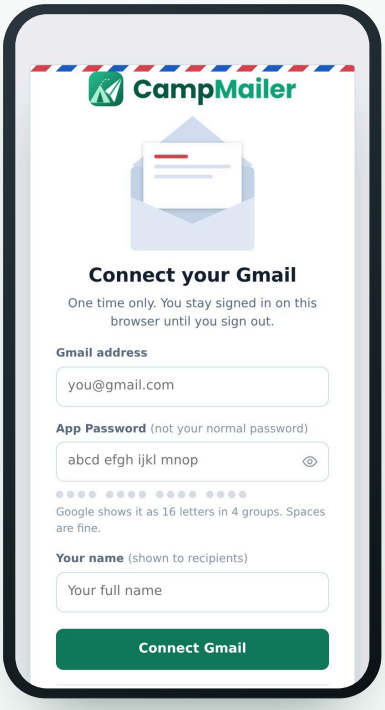

It is a special 16-letter password for apps. It is not your normal Gmail password, and you can delete it any time.

- Turn on **2-Step Verification** in your Google account.
- Open **myaccount.google.com/apppasswords**.
- Name it **CampMailer** and press **Create**.
- Copy the 16 letters. Spaces do not matter.

Careful. Never share it in chats or screenshots. If it leaks, delete it in Google and make a new one.

2 Sign in

Enter your Gmail address, the App Password and the name your recipients should see. Press **Connect Gmail**. You stay signed in on this phone until you press **Sign out**.

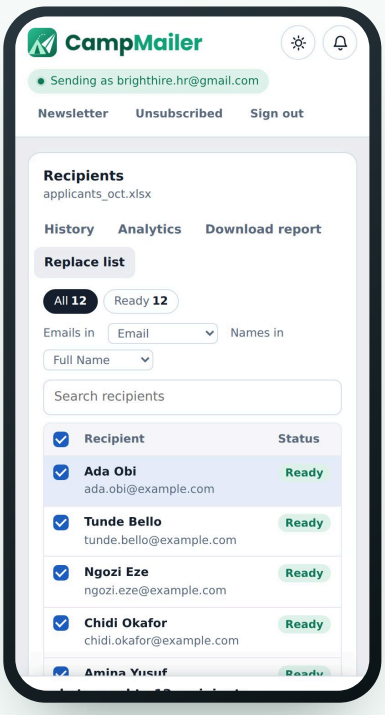

Sign in

3 Add your list

- Upload an **Excel (.xlsx)** or **CSV** file, or paste your list. The first row should be headings such as `Name` and `Email`.
- Invalid and duplicate emails are skipped for you.
- Untick anyone you do not want to email yet.
- **Try sample data** only sends to your own inbox, a safe way to practise.

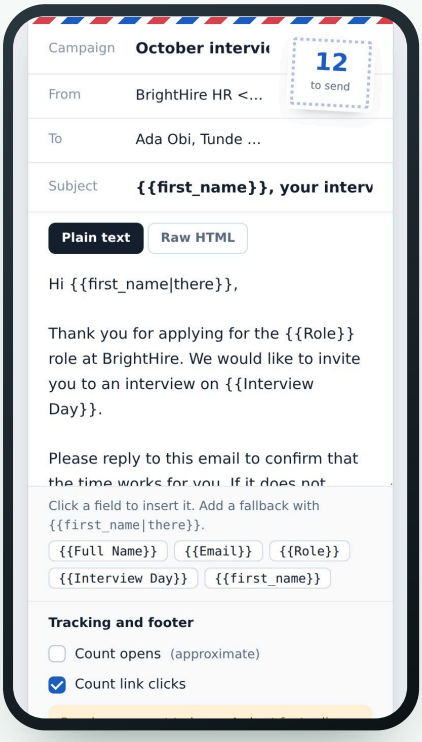

Good to know. Every list you load is saved in **History** on your device. Replacing a list never loses it.

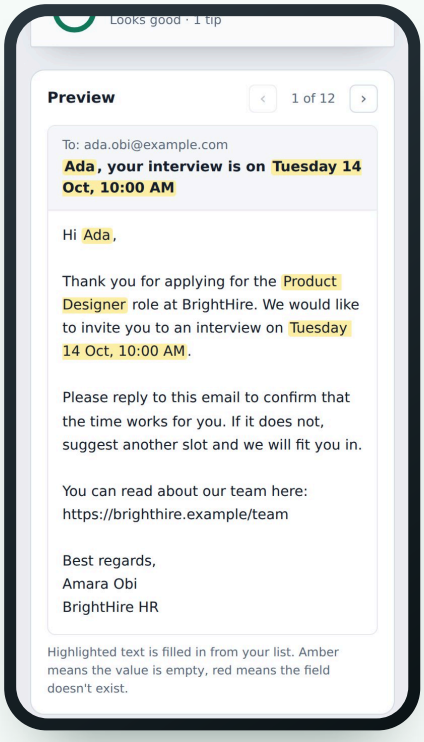

Your list, ready to go

STEPS 4 TO 6

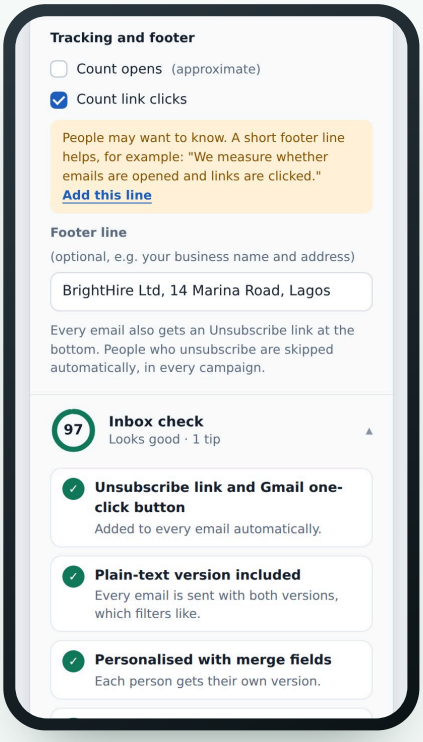

Write it. Check it.

Write your message

Preview each person's email

Tracking, footer, Inbox check

Make it personal

WRITE	BECOMES
`{{Full Name}}`	Value from that column
`{{first_name}}`	First word of the name
`{{first_name|there}}`	First name, or "there" if empty

In the preview, highlighted values are filled in. Amber means empty. Red means that field is not in your list. Always press **Send test to me** first.

Tracking and footer

- **Count link clicks** is the reliable one.
- **Count opens** is approximate. Some apps block images.
- **Footer line**: your business name and address.
- An **Unsubscribe** link is added to every email.

Inbox check

Under your message, a live score shows how spam filters may see it. Tap it for plain advice.

85+ Good | 65 to 84 Okay | Under 65 Risky

It checks for ALL CAPS, many exclamation marks, spammy phrases, link shorteners, too many links, image-only emails, hidden text and links that do not match their text. It also reminds you to personalise and add a footer.

Remember. The score is a guide. It cannot see your sender reputation, so a brand-new Gmail still needs a slow start.

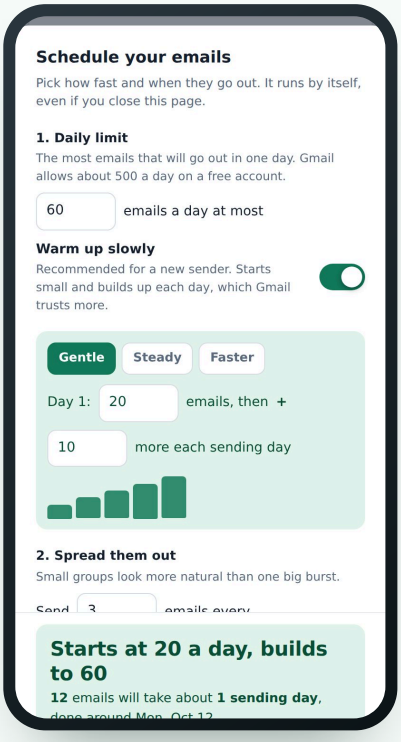

STEPS 7 AND 8

Send smart

Send now or schedule

Send now runs while the page is open and stops if you close it. **Schedule** keeps going on the server, even if your phone is off.

SETTING	WHAT IT DOES
Daily limit	Most emails in one day. Gmail allows about 500.
Send N every X	Small groups look natural. 3 to 5 every 15 minutes is a good start.
Only between	Your sending hours, in your time zone.
On these days	For example weekdays only.
Start	Right away, or a date and time you pick.

Plan the schedule

Warm up slowly

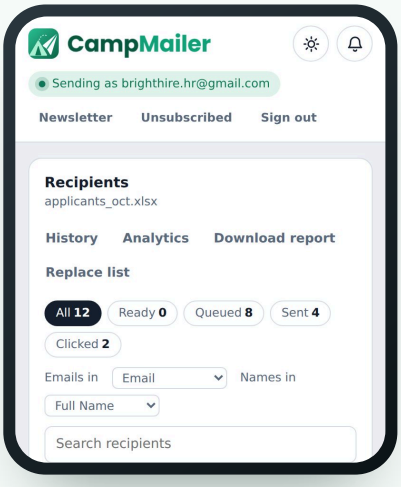

A new sender suddenly sending a lot looks suspicious. Warm-up starts small and adds a little every sending day until it reaches your daily limit.

Day 1: 20 emails — Gentle: +10 a day — Full: 100

Watch it send

- The dark bar shows how many are **sent**, how many went **today**, and **when the next group goes**.
- Each person shows **Queued**, **Sent** (with the time) or **Failed**.
- **Pause**, **Resume** or **Cancel** any time.

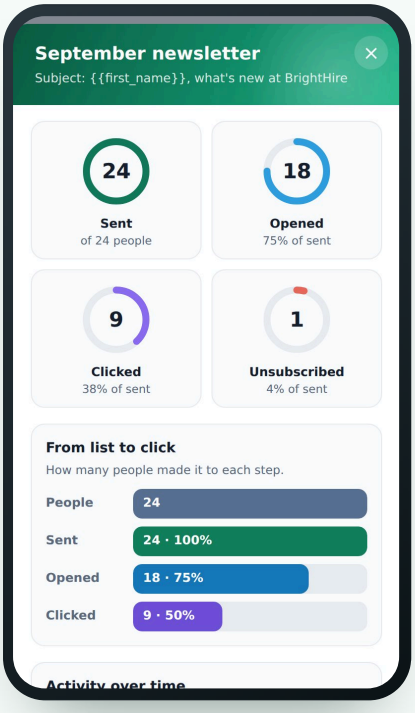

Live progress

Safety net. If sends keep failing, the schedule pauses itself and tells you, so a bad list cannot burn through everyone.

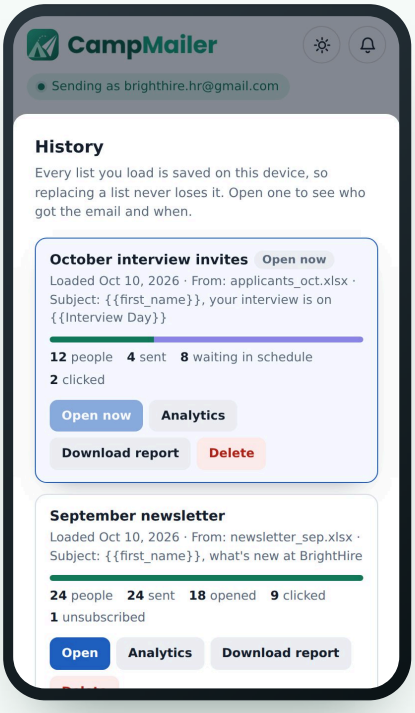

Alerts. Tap the bell to get a phone notification when a batch goes out, a campaign finishes or something goes wrong.

STEPS 9 TO 11

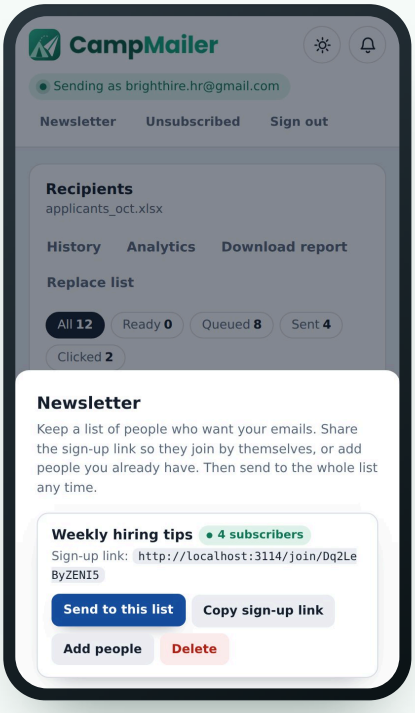

Know how it went

Analytics

History

Newsletter

History and analytics

Open **History** to see every list. Each card has **Open**, **Analytics**, **Download report** and **Delete**. Analytics shows sent, opened, clicked and unsubscribed, the best hour to send, and top links.

Unsubscribes

People who unsubscribe are skipped in every campaign. See them under **Unsubscribed** and use **Add back** only if they ask.

Newsletter

Create a list, share its **sign-up link** or add people who agreed, then tap **Send to this list**. Anyone who unsubscribes leaves the list automatically.

Install, alerts, dark mode

A green banner on your phone offers to install the app. Tap the bell for alerts, and the sun or moon for dark mode.

Staying out of spam: your checklist

- ✓ **Start slowly** with warm-up (20 to 30 a day).
- ✓ **Write like a person.** No shouting, few links.
- ✓ **Keep the footer** and unsubscribe link.
- ✓ **Remove bad addresses** after bounces.
- ✓ **Email only people** who expect it.
- ✓ **Personalise** with their name.
- ✓ **Use a business domain** for regular marketing.
- ✓ **Test first** and ask people to reply.

Step-by-step help, questions and answers: open **/docs** in the app.
